EDUCATION

DePaul University

Master of Science in Information Systems

Chicago, IL

Sep 2023 - Nov 2025

Coursework: Business Intelligence, Database Design & Management, Data Warehousing, Data Modeling, Cloud Computing

Gokaraju Rangaraju Institute of Engineering and Technology

Bachelor of Engineering in Electronics and Communication

Hyderabad, India

Aug 2016 - Oct 2020

SKILLS

Data Analysis: SQL (CTEs, Joins, Window Functions, Subqueries), Python/Pandas, Data Cleaning, Data Validation, EDA

Business Intelligence & Visualization: Power BI, Tableau, DAX, Dashboard Development, Data Visualization, KPI Reporting

Databases: PostgreSQL, Microsoft SQL Server, SSMS

Analytics Tools: Microsoft Excel (PivotTables, Lookup Functions, Power Query), Google Analytics 4 (GA4)

Tools & Methodologies: Git, Agile/Scrum

WORK EXPERIENCE

National STEM Honor Society

Data Analytics Intern

Remote, US

Mar 2026- July 2026

- Analyzed **26,500+ subscriber activity records across 189 campaigns** using SQL, Python/Pandas, Excel, and Tableau to evaluate engagement, retention, and conversion KPIs including **Open Rate, Unique CTR, CTOR, and zero-click behavior**.
- Identified and separated **~40% potentially bot-affected activity** using behavioral validation rules for rapid/repetitive engagement, organization-level patterns, and anomalies, improving **human-engagement metric reliability** and reducing inflated KPI risk.
- Diagnosed an **attention-to-action gap**, finding ~47% of campaigns generated opens without clicks and 79.3% of openers never clicked; developed recommendations targeting an **18% increase in CTOR, 14% increase in Unique CTR, reduction in zero-click campaigns from 47% to 37%, and reactivation of 13% of inactive subscribers**.
- Evaluated **15,000–20,000 school and district records** using Python/Pandas and SQL to clean, standardize, deduplicate, enrich, segment, and rank organizations by **STEM need, student reach, funding, program fit, and engagement**, identifying ~600 high-priority organizations for targeted outreach.
- Conducted **product and membership pricing analysis** in PostgreSQL across transaction, customer, product, discount, refund, cost, and competitive pricing data; analyzed **revenue, ASP, margins, and customer segments**, presenting pricing, bundling, and volume-pricing recommendations to **analytics, product, and executive stakeholders**.

Infosys Ltd

Systems Engineer

Hyderabad, India

Oct 2021- July 2023

- Developed backend systems for large-scale payment applications using Java, Spring Boot, Microservices, and SQL within a \$4B initiative, collaborating cross-functionally to improve application performance and reliability.
- Optimized SQL/MySQL database operations and application processes, reducing deployment time by 20% and troubleshooting-related downtime by 15%, while applying Agile/Scrum practices for timely production releases.

PROJECT EXPERIENCE

E-Commerce Funnel, Conversion & Revenue Analysis | [GitHub](#) | SQL, Power BI

Jan 2026

- Diagnosed **82,000+ marketing, transaction, product, and inventory records** to uncover funnel-stage conversion bottlenecks, identifying a **94.5% cart abandonment rate** and estimating **\$45K+ in lost quarterly revenue**.
- Developed reusable SQL queries and analytical models to build session-level funnel and revenue models, improving metric consistency by **22%** and enabling cross-channel performance comparisons.
- Automated Power BI funnel reporting with **data models and DAX**, reducing manual analysis by **40%** and informing UX/marketing recommendations projected to increase checkout completion 3–5% and annual revenue \$120K+.

SaaS Revenue, Retention & Monetization Analytics | [GitHub](#) | SQL, Excel, Power BI

Dec 2025

- Analyzed 18 months of **SaaS subscription and revenue data (6,500+ customers)** using SQL trend, cohort, and retention analysis to diagnose declining MRR, identifying **16% churn, 74% NRR, and revenue contraction risk**.
- Built scalable **revenue and retention models** using SQL and an Excel-validated dataset to calculate MRR bridges, expansion, downgrades, and churn, improving metric consistency and reporting accuracy by **20%+**.
- Quantified **revenue leakage and pricing concentration**, identifying **60%+** of revenue in the Pro tier; delivered retention and upselling insights supporting strategies projected to protect **\$250K+ in ARR**.
